

CoolLayer 1M205 - Medical Blanket

CoolLayer 1M205 is a medical blanket manufactured from specialist air transfer fabric. It is designed to provide heating or cooling to the body of wounded personnel. The effect of maintaining core temperature inside the critical range greatly increases the chances of survival for hyperthermia vulnerable soldiers in the field.

Specification	Details
Weight	2.25kg
Dimensions	1.95m long, 550mm wide folded
Operational Temperature	-25 to 52°C
Power Usage	None
Colour	Available in White / Grey / Black
Notes	<p>Designed and manufactured in the United Kingdom</p> <p>Suitable for use in any operational environment</p> <p>Heat and cool version for high altitude/high temperature variance environments</p>

CoolLayer 1M205 works with ManPAC. ManPAC is a 24v DC powered air cooling unit for personnel operating in extreme climates. The unit delivers controlled cooled air to a body worn layer, and relieves heat stress and fatigue resulting in greater operational effectiveness, and ultimately, increased survival. ManPAC regulates the temperature of the air supplied, to allow the body thermo-regulation to work normally.

Applications:

- Open vehicles
- Exposed observation and field locations
- Vehicles with inadequate/no installed cooling
- Field medical facilities
- Medevac aircraft

INNOVATIVE MILITARY HVAC

MISSION

“Our purpose is to redefine tactical HVAC systems through careful design, enhanced integration, and application of proven efficient technologies.”

We specialise in integration of the disciplines necessary to resolve today’s challenges. Working within structural engineering constraints, refrigeration, thermodynamics, acoustics, electrical, controls and physiological issues are taken account of to produce rugged and powerful systems that keep returning efficient results over their lifetime.
